

Oprila Restaurant voice AI

Features already completed:

1. Table booking
2. FAQ answering
3. Authentication
4. Health check

Features need to implement

1. Hotel API integration layer (Integration with hotel's existing APIs) -> (High priority)
2. Call session/Context management: (High priority)
3. Order/booking submission + confirmation : Idempotency key when POSTing to hotel API (phone retries, network blips shouldn't create duplicate orders): (High priority)
4. Fallback & escalation : Human transfer path if AI can't understand/complete the flow: (Medium priority)
5. Multi tenancy: (Medium priority)
6. Call recordings and transcripts storage: (Medium priority)
7. Security tests (Medium priority-> Once api is set)

Will conclude the high priority tasks first and after that work on medium priority tasks.

Current call recording sample:

https://drive.google.com/file/d/1Y4r_dE260F4hIbV-BXI-MnKb1zFPR3Df/view?usp=sharing

For SaaS web app:

The voice AI activation might take 1-5 business days for **Regulatory compliance**.

Step 1: Client will enter their details for onboarding.

1. Business identity details
2. Operational details
3. Hotel API integration credentials and api docs
4. Menu/service specifics
5. Voice/brand persona(preferred welcome script, voice etc)

6. Billing/plan
7. Escalation contact (staff number to fallback to real staff)

Step 2: Twilio number provisioning

1. **Buy/assign number** via Twilio's Console or Buying API
2. Regulatory compliance
3. Number configuration
4. Testing - (Internal testing)
5. Going live

We can keep the progress tracker for time until go-live so that client can monitor.
